

Design Language

Anker Innovations' icon system derives its distinctive character from the brand's core identity, incorporating the diagonal stroke of the "A" in Anker Innovations into every icon. This creates a signature visual trait across the icon set.

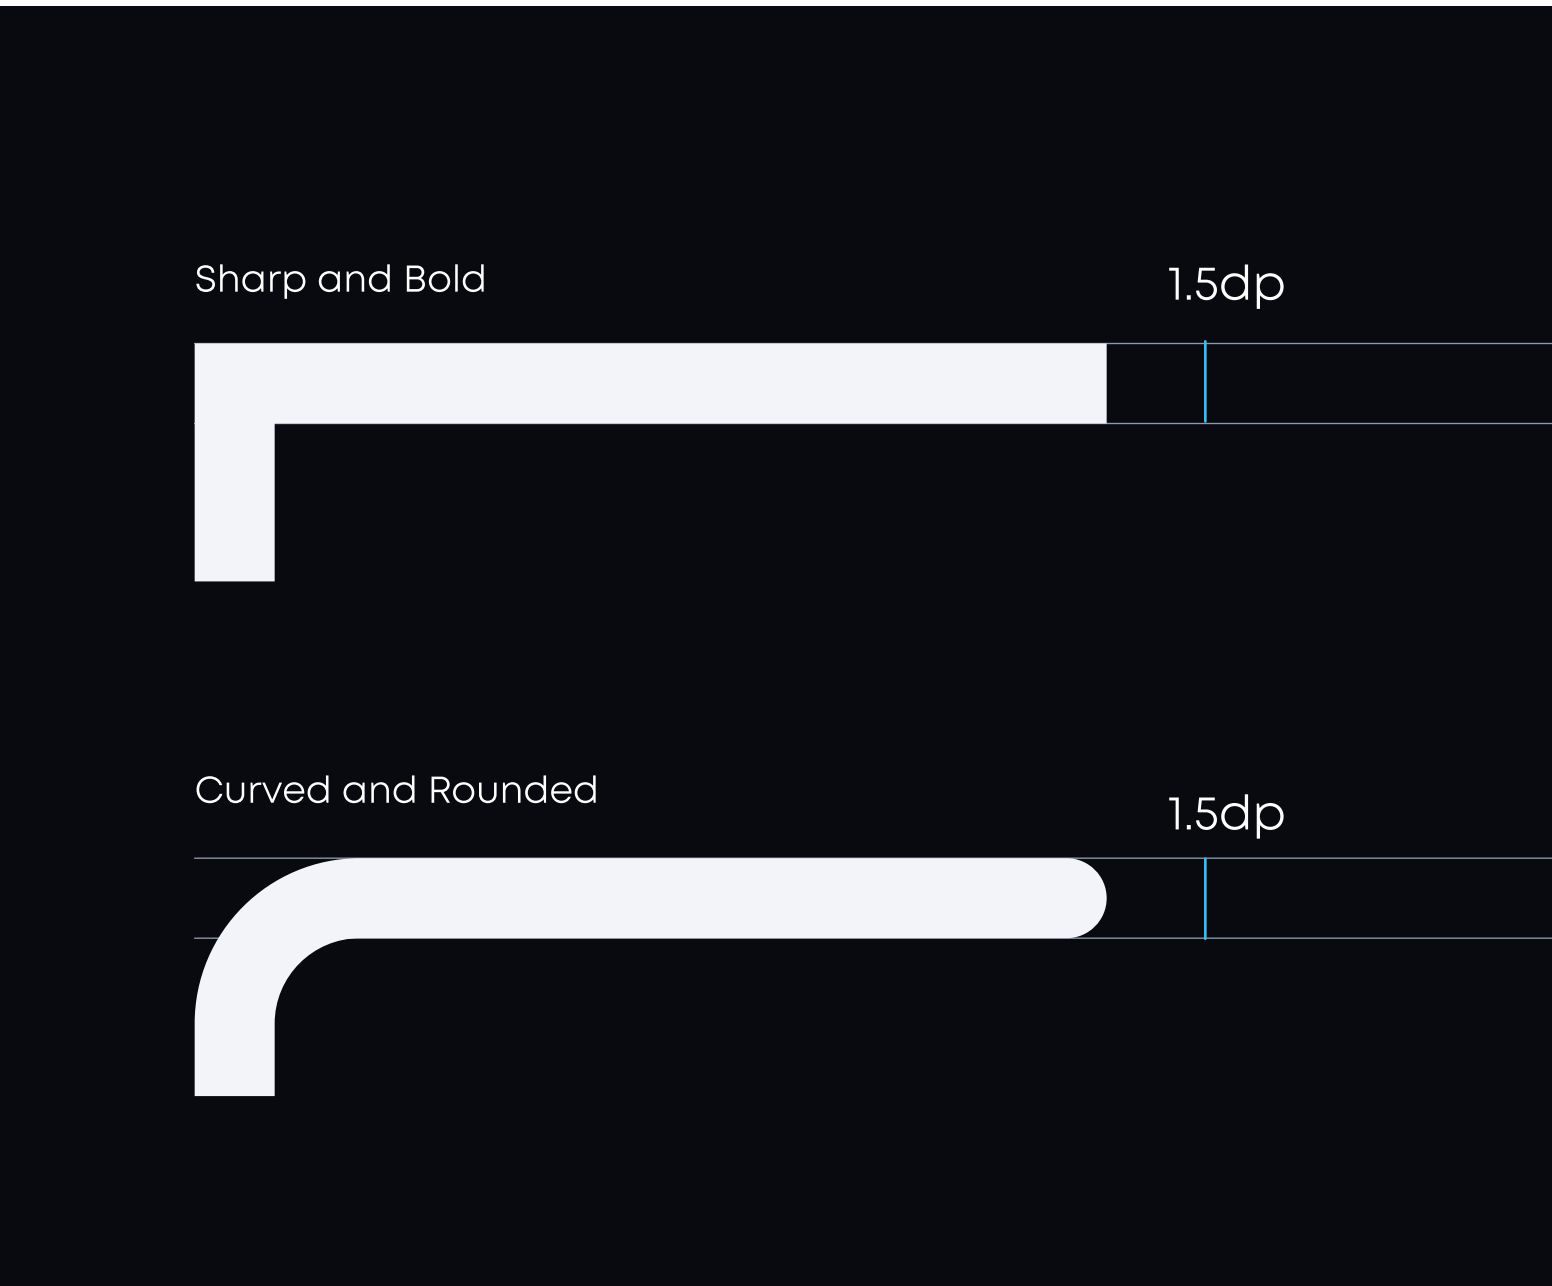

Tilt Angle

Icons should be composed of minimalist geometric forms. All primary diagonal strokes should consistently use a 65° tilt angle for visual coherence.

Line Breaks

All icons should feature a consistent break (disconnection) in the lines, with a standard gap size of 2 dp. While break positions may be adjusted slightly based on icon shape, icons with the same base size and form must use identical break dimensions.

Outlines

All base icons must be constructed using single-stroke outlines of uniform thickness. The default line weight is 1.5 dp. Depending on the icon size and application context, icons may adopt one of two visual styles: Sharp and Bold or Curved and Rounded.
