

# Circle

Circles—including perfect circles, ellipses and rings—are used in infographics to convey focus, balance, cycles and proportions. They enhance both visual impact and logical clarity. Applications include but are not limited to:

## Ring Chart

Illustrates the proportion of a single element within a whole, such as progress, battery level, or completion rate.

## Pie Chart

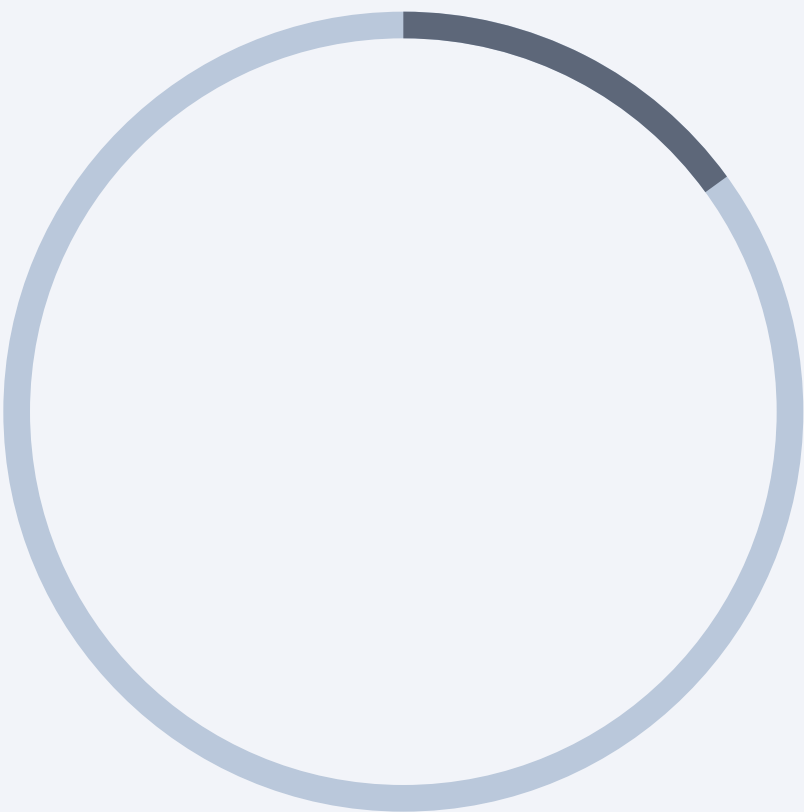

Uses sector slices to visually show part-to-whole relationships or data distribution across categories.

## Markers and Zones

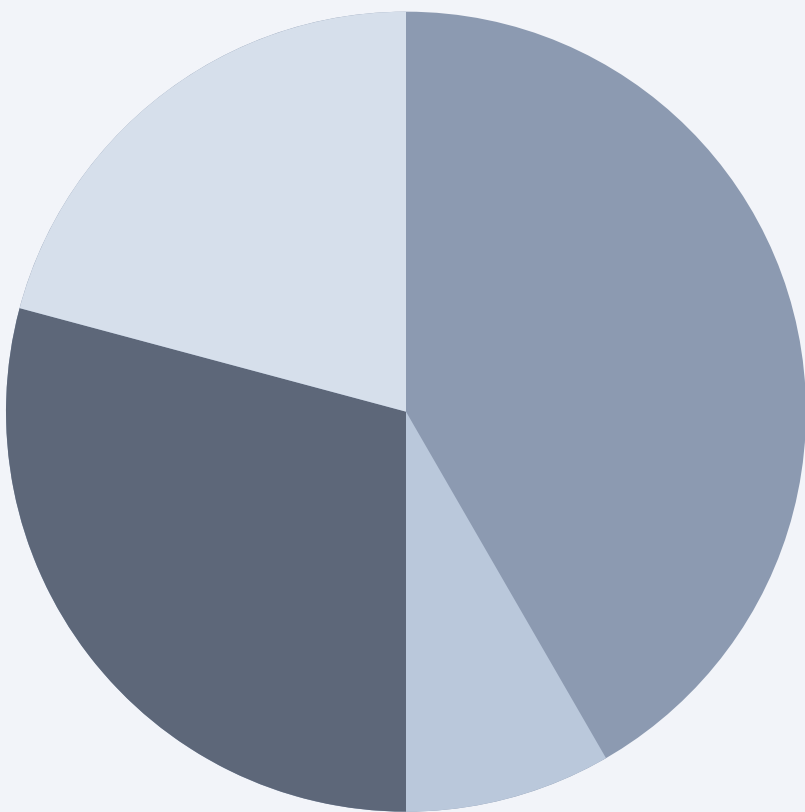

Circular points can be used for node labels or map markers. When adjusted for opacity and size, they also serve as selection indicators for geographic regions.
