

# Line

Lines function as primary visual elements, capable of presenting a wide range of information and adapting to specific data requirements.

## Coordinate Systems and Reference Lines

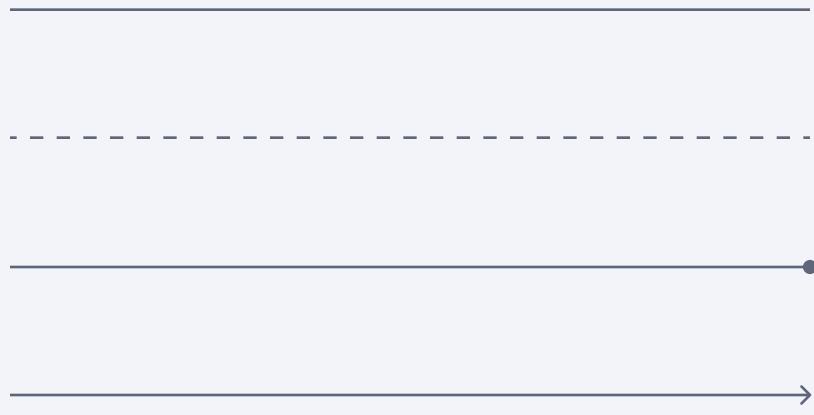

Supply numerical baselines for charts, allowing users to quickly locate data points and ensuring consistent placement of graphic elements.

## Line Chart

Illustrates how data change over time—or along any continuous variable—and allows side-by-side comparison of multiple categories via separate trend lines.

## Connecting Elements

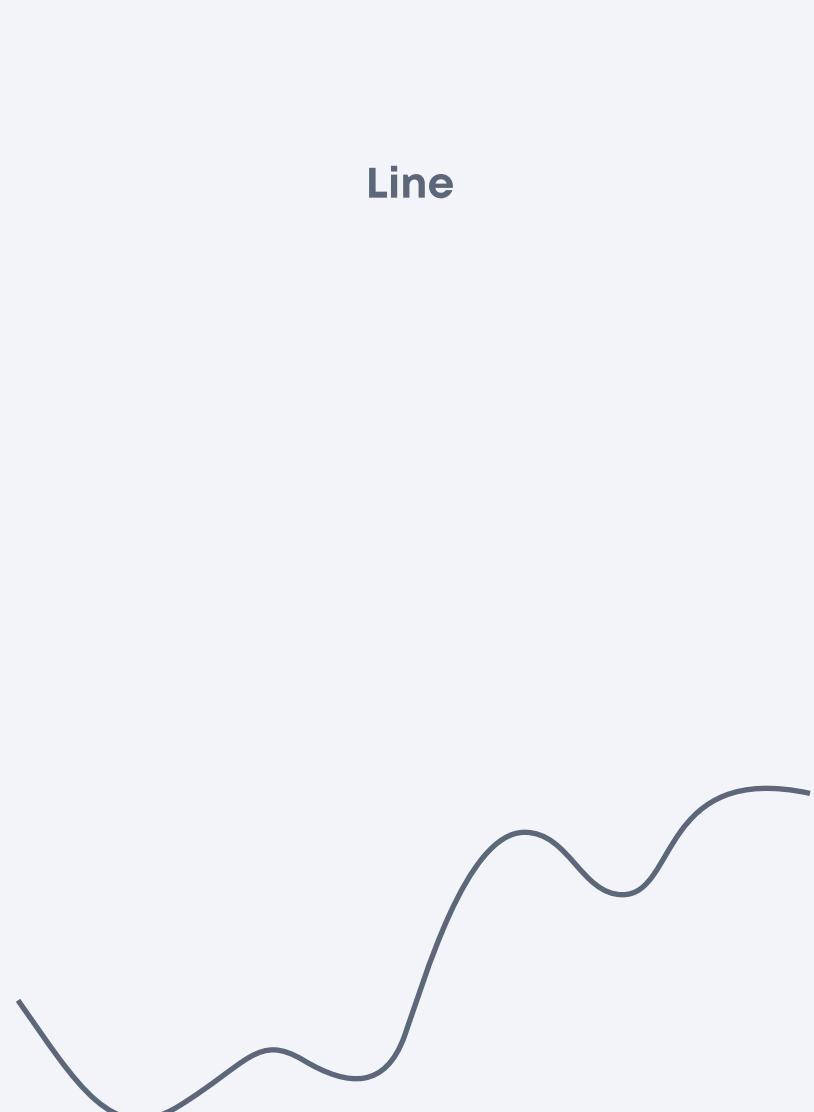

Clarify causal relationships or sequential steps between components, guiding the viewer's attention to critical information.
