Special Application Examples

Special Layout for Official Website

To accommodate the pairing of domain and category sub-brand logos with various subheadings on the official website, a special layout has been designated.

A black header bar is added to the top of the webpage, with the company brand logo in horizontal orientation placed on the right side of the header.

The logo height is one-third of the header height, vertically center-aligned, and offset from the right edge by a distance equal to the header height.
